## **SRT wins Best Technology Company at AIM awards 2006**

Software Radio Technology is delighted to announce that it has been awarded the prestigious Best Technology Company prize at last week's AIM awards. The award ceremony took place in London and was attended by over 1,200 leading figures from the UK business and financial community.

Having joined the AIM market in November 2005, the company faced stiff competition for this award from other nominees. However the committee felt that SRT's success within its target markets and innovative digital communications and marine tracking technology were a winning combination.

SRT has developed a range of advanced core technology solutions targeting homeland security applications such as digital communications for use by homeland security agencies and identification and tracking for marine traffic. These technologies have been successfully licensed to manufacturers worldwide with notable success being achieved in the tough Asian markets with its TETRA technology.

Shamus Kelly, SRT's Managing Director said: "This award is the result of years of hard work by everyone at SRT. We are very grateful for this recognition of our achievements and success to date by the financial community."

**About SRT:**

Founded in 1987, and floated on AIM in November 2005, SRT is a UK based company that develops complete, ready to manufacture enabling wireless technology solutions for applications within homeland security tracking and digital communications applications. SRT's solutions enable manufacturers to localise and significantly fast track, de-risk and cost reduce the development and manufacture of final form complex products. The company has a worldwide base of strategically located customers and is the world's number 1 provider of Marine-AIS and PMR-TETRA technology solutions. TETRA is now the world's leading secure digital communications standard and has been adopted in over 80 countries worldwide, AIS was mandated by the IMO in 2002 on all vessels over 300MT and is now being used by authorities to monitor marine traffic. SRT earns a per unit royalty on every product manufactured containing its technology.
